

**ENERGY STAR
Qualified
Windows**

Just One of the Energy-Saving Features Built Into Fred Williams' ENERGY STAR Qualified Home.

Fred Williams installs high-performance ENERGY STAR windows in our ENERGY STAR qualified homes so that you can enjoy the view, while saving money on your utility bills. These energy-saving windows also help protect valuable furnishings and finishes from sun damage.

Benefits Of ENERGY STAR Qualified Windows:

■ **IMPROVED COMFORT**

ENERGY STAR windows have advanced technologies--like special coatings, vacuum-sealed spaces between panes, improved framing materials, and better weather stripping--to thousands of dollars in savings over the time you live in the home.

■ **ENERGY SAVINGS**

ENERGY STAR windows can reduce your energy bill by up to 15 percent annually - which can add up to thousands of dollars in savings over the time you live in the home.

■ **PROTECTION OF YOUR HOME'S INTERIOR**

Photographs, furniture, flooring, and window treatments can fade or discolor after prolonged exposure to direct sunlight. ENERGY STAR windows have special (LOW-E) coatings to reduce fading by up to 75 percent.

■ **REDUCED CONDENSATION AND MOLD**

Inefficient windows can lead to condensation that may damage window sills, cause paint to crack, and encourage the growth of mold. We use ENERGY STAR windows because of their advanced frames, coatings, and other features, that reduce the potential for condensation, and ensure a clearer view on cold days.
